1 What Doxycycline capsules are and what they are used for
Doxycycline belongs to a group of medicines called tetracycline antibiotics. It is also known as a broad-spectrum antibiotic and may be used to treat a wide range of infections caused by bacteria, these include:
- respiratory tract infections
- urinary tract infections
- sexually transmitted diseases
- skin infections such as acne
- infections of the eye
- rickettsial infections such as Q fever or tick fever
- other infections such as malaria, cholera, brucellosis, rickettsial infections such as Q fever or tick fever
- infections of the eye
- skin infections such as acne
- infections of the eye

2 Before you take
Do not take Doxycycline capsules and tell your doctor if you:
- are allergic (hypersensitive) to doxycycline, other similar antibiotics (such as minocycline or tetracycline) or any of the other ingredients in the capsule (see section 6)
- are giving it to a child under 12 years old.

Take special care with Doxycycline capsules and tell your doctor if you:
- have liver disease or are taking medicines which affect your liver
- have porphyria (a genetic disorder of the blood)

3 How to take
Always take Doxycycline capsules exactly as your doctor has told you. If you are not sure, check with your doctor or pharmacist.

You should take the capsules either with a full glass of water. You should take the capsules either sitting down or standing up and well before you go to bed for the night to stop irritation and ulceration of your gullet. It is important not to lie down for at least thirty minutes after taking Doxycycline capsules.

The usual doses are for at least 10 days unless otherwise directed by your doctor:
Adults, Elderly and Children 12 years or over:
- The usual doses are for at least 10 days unless otherwise directed by your doctor:
  - General infections: 200mg on the first day as a single or two 100mg doses, followed by 100mg a day. For severe infections your doctor may increase the dose to 200mg a day.

4 Possible side effects
- suffer from myasthenia gravis, a condition characterised by muscle weakness, difficulty chewing and swallowing and slurred speech
- are sensitive to sunlight
- have systemic lupus erythematosus (SLE) a condition characterised by a rash (especially on the face), hair loss, fever, malaise and joint pain.

Taking other medicines
Please tell your doctor or pharmacist if you are taking or have recently taken any other medicines, including medicines obtained without a prescription. Especially:
- warfarin or other anticoagulants (to stop the blood clotting)
- penicillin or rifampicin (to treat infections)
- medicines such as antacids containing aluminium, calcium or magnesium or other medicines containing iron, bismuth or zinc salts. Do not take at the same time as Doxycycline capsules, as absorption of doxycycline may be reduced.
- phenobarbital, carbamazepine, phenytoin or primidone (to treat epilepsy)
- oral contraceptives (the pill)
- methoxyflurane (an anaesthetic), if you need an operation, tell your doctor or dentist you are taking Doxycycline capsules
- ciclosporin (used following organ transplants).

Pregnancy and breastfeeding
If you are pregnant, planning to become pregnant or are breast feeding ask your doctor or pharmacist for advice before taking any medicine as doxycycline could harm the baby.

Possible side effects

Like all medicines, Doxycycline capsules can cause side effects, although not everybody gets them.

Stop taking the capsules immediately and seek urgent medical advice if:

- you notice that your skin is very sensitive to light (you may get a skin rash, itching, redness or severe sunburn when out in sunlight or after using a sunbed).

Contact your doctor at once if the following reactions happen:

- wheeziness, difficulty in breathing, fever, swollen lymph nodes of the face, lips, throat, tongue, hands or feet, fast heart rate, low blood pressure, rash or itching (especially affecting the whole body), pericarditis (inflammation of the membrane surrounding the heart)
- swollen tongue, watery diarrhoea, fever and cramps (pseudomembranous colitis), soreness and itching around the back passage and/or genital areas, inflammation around the vagina, or thrush of the vagina or mouth
- worsening of systemic lupus erythematosus (SLE)
- swollen tongue, watery diarrhoea, fever and cramps
- worsening of systemic lupus erythematosus (SLE).

Tell your doctor if you notice any of the following side effects or notice any other effects not listed:

- Blood: altered numbers of certain types of blood cells, you may notice that you bruise easily, have nose bleeds, or suffer from infections and sore throats, porphyria (sensitivity of the skin to sunlight, inflammation of nerves and stomach pains).
- Glands and hormones: discoloration of thyroid tissue (does not affect thyroid function).
- Central nervous system: headache, increased pressure in the skull (severe headaches, blurred and/or double vision, blind spots), permanent loss of vision, bulging fontanelles (soft spot on head) of infants.
- Ears: tinnitus (ringing or buzzing in the ears).
- Gastrointestinal tract: stomach pain, loss of appetite, feeling or being sick, heartburn, diarrhoea, difficulty swallowing, sore or painful tongue or mouth, inflammation and/or ulcers of the gut, discoloration or underdevelopment of teeth.
- Liver: changes in liver function tests, inflammation of the liver (hepatitis), jaundice (yellowing of the skin or white of the eyes), liver failure and inflammation of the pancreas (pancreatitis)
- Skin: severe skin reactions such as erythema multiforme (circular, irregular red patches), Steven-Johnson syndrome (rash with flushing, fever, blisters or ulcers), toxic epidermal necrolysis (reddening, peeling and swelling that resembles burns).
- Muscles and bones: muscle or joint pain.
- Kidneys: an increase in area in the blood.

If you notice any side effects, they get worse, or if you notice any not listed, please tell your doctor or pharmacist.

How to store

Keep out of the reach and sight of children.

Store below 25°C in a dry place.

Do not use Doxycycline capsules after the expiry date stated on the label/carton/bottle. The expiry date refers to the last day of that month.

Medicines should not be disposed of via wastewater or household waste. Ask your pharmacist how to dispose of medicines no longer required. These measures will help to protect the environment.
